演講題目：Introduction to Fusion of Social Big Data and Robotics

演講摘要：

Both of social data and robotics are essential for improving our life and society. Social big data refers to heterogeneous data source including both social data and physical real world data, and its utilization becomes key issue for modern society. In particular, the fusion of social data and robotics are essential for improving our life and society. In this talk, we introduce our ongoing research project about community-centric system and social big data mining.
