

專題演講

講者：I-Ting Fang engineering director (Appier)

題目：Multifaceted Data Product Development

大綱：

Data is considered fuel in modern product development and economy. In the talk, we'll review the key ingredients to build data products, different perspectives of data product builders, and different kinds of data related products. After the horizontal scanning of key ingredients and perspectives, we'll take the timeline view to see the waves of data products and finally the implied career opportunities in data.

簡歷：

I-Ting Fang is an experienced architect and leader in building internal and customer facing data products. She's the engineering director at Appier building a data science platform as a service, and serves as a consultant in the Ministry of Digital Affairs to facilitate governance's open data applications and privacy enhancing technologies development. Prior to her career in Taiwan, she was an engineering and data science manager in Microsoft USA and UK, leading teams to build Azure Custom Vision Service, SwiftKey and Bing Answers ranking system. I-Ting Fang graduated from Stanford MS focusing on computer vision and machine learning, and got her bachelor's degree from NCTU EECS Honors Program.
