講 者： 吳鵬榮 Patrick Wu (鐵雲科技, VP of Engineering)

題 目： A Deep-learning-based Video Search Platform

摘 要：

A deep-learning-based AI video search platform is developed. The AI video search system is capable of processing live stream from surveillance cameras using AI deep-learning technology. User can easily search for important events such as person, vehicle, objects, and color by few mouse clicking. In this presentation, we will describe how it works and provide a live demonstration. Real world applications including intrusion detection, face search and people/vehicle counting will be discussed.
