演講題目：Text mining techniques and applications in some "big" data

演講摘要：

The value of big data in Web is explosively increasing as the size of Web increases as well. Using the text mining technique on this big data will make the information on Web useable and valuable.

This talk will introduce some fundamental text mining techniques for developing a platform that can analyze multiple bio-medical information sources, e.g., literature, databases, huge Web and social community pages, and micro-blogging messages. Some interesting and useful applications on some "big" text data will also be included.
